How the Neco works

Values

We measure Community Happiness as our key performance indicator. We value sustainability, equality, diversity, sharing, collaboration and altruism.

Fundraising & Crowdfunding

Every member of our community can create new money for beneficial organizations such as charities, non-profit or conservation organizations. Members can safely lend each other money without carrying the risk of payment default.

Stability & Inflation

The Neco is designed as a stable, non-volatile currency that compensates for inflation. We guarantee conversion rates to all major currencies and eliminate currency speculation.

Universal Basic Income

Active members can sign up for and receive universal basic income. Our community defines the conditions and sets the limits based on our organization's liquidity.

Free Global Banking

We are funded by donations and do not charge interest or transaction fees. We support all major fiat currencies - dollars, euros, pesos, etc. Pay globally with your phone or card. Instant payment with no charges within the Neco community. We partner with accredited local banks that support our community and share our vision.

The value of the Neco is tied to a basic daily ratio of food. Our members are encouraged to follow our value recommendations for key resources. We promote mindful consumption and saving of resources.

Resource-based

Security & Protection

We help protect buyers, sellers & businesses by providing more secure payment and money back guarantees. We do not share your personal information without your consent. Your transaction history is private and not stored in public general ledgers like most cryptocurrencies. Our members can rate each others trustworthiness and payment morale.

Collect rewards when you purchase environmentally-friendly products, safe resources or support our community. The more rewards you collect, the more new money you can create, donate and receive. Share and exchange your rewards with peers.

Community Rewards

Our Mission

We collectively create a fair, sustainable and trusted global currency.

Our vision is to develop a new monetary system that provides free social and environmental services - universal basic income, ecology, education, healthcare and science.
